Aircraft Parking starts 8 hour later from the landing time on the runway and covers a 24-hour period.

SHM Airpark Management determines the parking places in the hangar or apron.

The total square footage covered by the aircraft is calculated by multiplying the two longest dimensions of the aircraft with each other. In helicopters and gyrocopters, in vehicles with 2 rotor blades, blade length is included in the calculation so that the blades are parallel to the tail, similar calculations are available for other vehicles. The maximum length and width that will covered in the hangar are multiplied.

Acceptance of the request for the extension of the airpark working hours is under the authority of the Airpark Management and there is no obligation to extend it. This request must be written to the Airpark Management or to the AIS Office during working hours at the latest one day before the planned extension.

Each aircraft using extended working hours in the airpark pays this fee separately.

The fees determined for the services **do not include VAT**.

*** This price list is not applied under the following conditions;**

For natural disasters or humanitarian aid; aircraft carrying aid materials and personnel, disaster victims and their companions, aircraft carrying Heads of State making official visits, aircraft carrying military aid materials to our country, specially assigned aircraft under the command of military, civilian officials and delegations making official visits.
